ARCHITECTURAL LIGHTING

ARCHITECTURAL lighting is one of the most beautiful and inspirational ways to illuminate a structure. A location or building can take on a totally new ambience when creatively lit

We can transform your building with colourful light for special events like weddings or grand openings, or to permanently illuminate a home or structure.

From a simple wash of colour to a fully orchestrated multimedia extravaganza we will make your venue look spectacular.

COMMERCIAL illuminations will make you stand out from the crowd in the current climate, and what better way to create a buzz than by exploiting your property with breathtaking lighting effects to promote your business.

Creative lighting will enhance your presence and make you the talk of the town. Competitors will be left in the dark.

Options vary from a simple installation creatively illuminating your window displays to a large scale projection utilising the facade as an advertising space.

RESIDENTIAL LIGHTING

RESIDENTIAL illuminations will transform a home, driveway or garden feature with our external lighting packages. The wow factor of a BBQ, dinner party or wedding will be infinitely increased.

We provide permanent installations to illuminate structural features, patios, driveways, trees or water features, and short term hire for special occasions. Whatever your needs we can bring your ideas to life.

We can even include your internal lighting requirements like a colour changing shower room, under cupboard lighting in the kitchen or general spotlighting.

Whether it's illuminating a hotel for a corporate event, a grand opening or an orchestrated multimedia project on the exterior of a cathedral on Christmas Eve we make breathtaking illuminations happen

We have expertise in diverse methods of lighting from low energy LED and lasers to video projection, and we select the best components to make any size illumination spectacular.

Options include simple colour floodlighting, large scale multimedia projections, even illuminating an entire shopping mall or castle.

Video and Image Projections can't be beaten for attracting attention and getting a message across.

Whether it's projecting a logo for a corporate event, supporting a touring band or covering the exterior of a Sports Centre we can make breathtaking projections happen in any environment

We have expertise in diverse methods of projection systems from retail image projectors and jumbo sized corporate presentations systems to covering an entire building in motion graphics.

DIGITAL SIGNAGE

DIGITAL Signage advertises your business in ways you hadn't imagined and is the marketing technology of the moment

Digital signage is a wafer thin, completely transparent projection film which can be placed anywhere - windows, walls, ceilings. Customisable to any size and shape from small table top displays to entire walls or multiple panels. Display video, images, slideshows at a single site or broadcast them to multiple locations over the internet.

Touchscreen surfaces allow customers to control what they see, even through glass. Cables, bulky TVs and stands are a thing of the past. Just a nice smooth cable free surface.

An interactive digital window display effectively means business is open 24.7. Imagine the benefits, customers can view products, place orders, leave messages or simply enjoy an interactive display, even when you are closed.

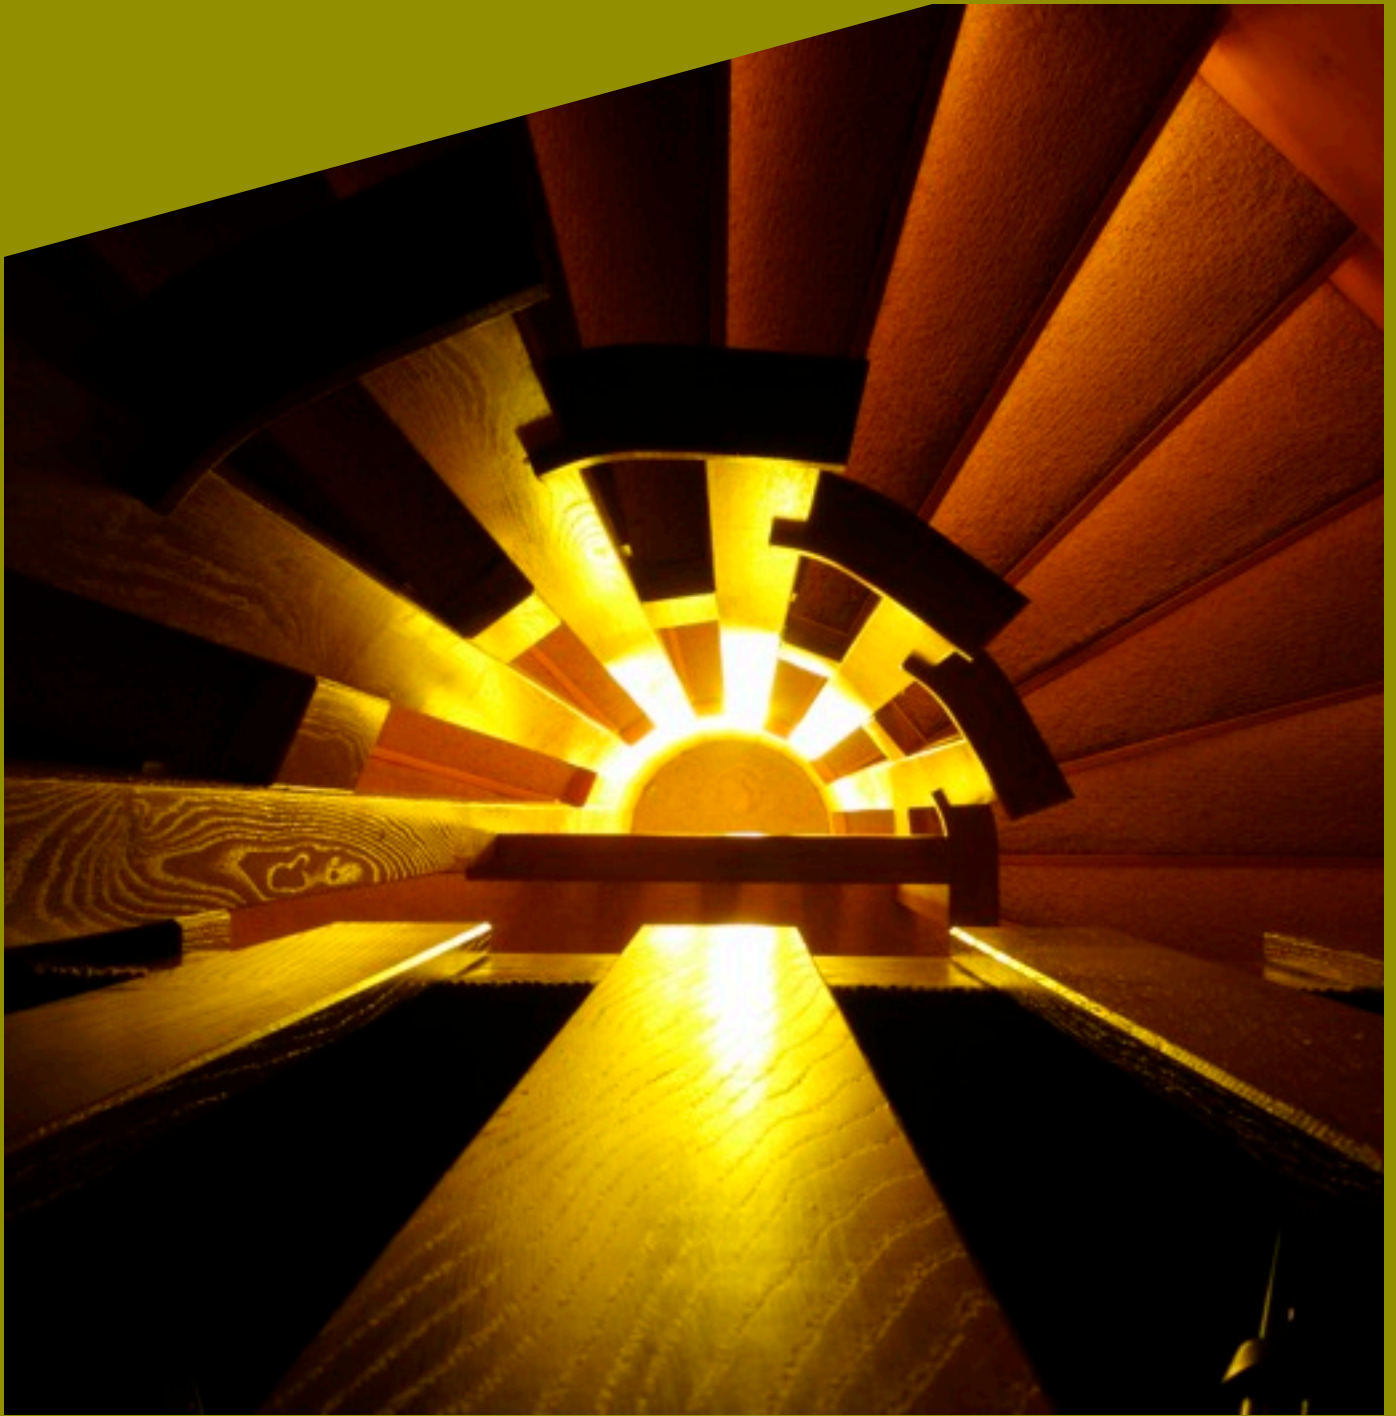

Digital signage will help you stand out from the crowd and generate new revenue.

We excel in all aspects of event support from live concerts to corporate events and weddings. We can also produce an entire event providing a tailored solution from stage management to equipment hire.

Our ethos is to deliver a smooth and trouble free event. From an evening's entertainment to a four week european tour Jaw will deliver your event efficiently and professionally because we:

- ✓ Supply the finest audio visual equipment, infrastructure and media facilities available.
- ✓ Understand the importance of having the best technicians, from sound and video engineers to riggers.
- ✓ Provide the best supporting infrastructure like transportation, accommodation and security.
- ✓ Manage the project in a professional, co-ordinated manor and communicate at every step of the process.
